- Zone3' All Teos series products are within the scope of Zone 3 seismic resistance tests.
  - Zone3' test was conducted for double-door enclosures of size 1200 widthx2000+100 height and 600 mm depth, and covers all sizes and types of the Teos series.
  - You can view the complete report on our websites.

## **ZONE 4**

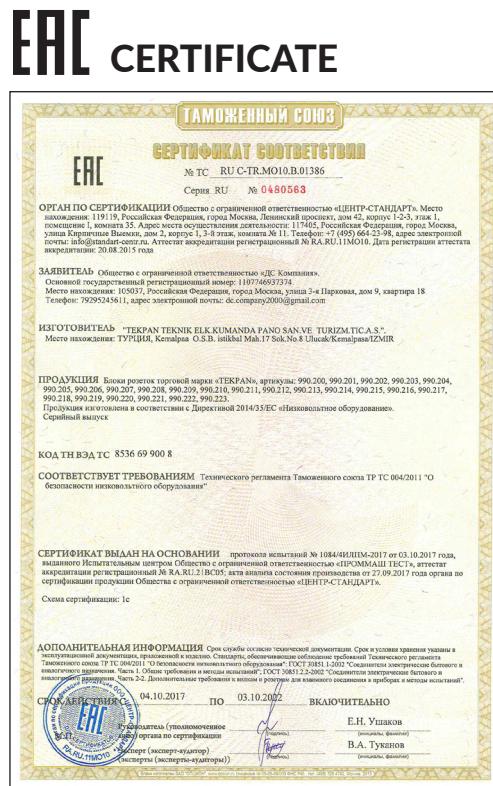

<b>1. GENERAL DATA</b>	<b>1.7. Testing laboratory</b>
<b>1.1. Customer</b>	P&P I.M.C. S.r.l. via Padre Pio, 9 20090 Sesto San Giovanni (BG) ITALY

<b>1.2. Unit under test</b>	<b>1.8. Test date</b>
The tests were performed on the following unit: <ul style="list-style-type: none"> <li>TEOS Plus single door enclosure, with a total mass of 315 kg.</li> </ul>	October 17 <sup>th</sup> – 18 <sup>th</sup> , 2012.
<b>1.3. Manufacturer</b>	<b>1.9. Responsibilities</b>
TERPAN TEKNIK ELEKTRİK.	A. Bonzì, test responsible M. Civera, test engineer D. Recalcati, test engineer
<b>1.4. Reference documents</b>	<b>2. TESTING PROCEDURES</b>
<b>1.4.1. Contract documents</b>	<b>2.1. General remarks</b>
a. Other FPP-LMC LNE No. 08-AB-0417 rev 01, dated June 18 <sup>th</sup> , 2012. b. Order Teqsan dated June 19 <sup>th</sup> , 2012.	To perform the tests, three reference directions have been considered for the unit: X (front - rear), Y (side - side) and Z (vertical).
<b>1.4.2. Technical documents and standards</b>	The sequence of the tests for the unit has been: <ul style="list-style-type: none"> <li>Seismic tests, performed in three directions (X, Y, Z) and consisted in:  <ul style="list-style-type: none"> <li>vibration response investigation</li> <li>excitation</li> <li>vibration response investigation</li> </ul> </li> </ul>
1. TÜVÖG Güvenlik ve Güçlendirme GR-63-CORE, NEBS Requirements: Physical Protection, Issue Date: 1995. 2. IEC 60068-1-3: Environmental testing - Part 3: Guidance: Seismic test methods for equipment; 3. IEC 60068-2-6: Environmental testing - Part 2: Tests - Test Fc: Vibration (sinusoidal); 4. IEC 60068-2-57: Environmental testing - Part 2: Tests - Test F: Vibration - Time-history method; 5. ISO 2631 Vibration and Shock - Vocabulary.	All the application vibrations were monodirectional.  Tests in Z direction were performed on a vertical shaking table moved by an electro-dynamic shaker. For the other excitation directions, a horizontal shaking table was used. Excitation directions are shown in the photographs.  All the performed tests are listed in the tables of page 15. Tests were numbered following the chronological sequence.
<b>1.5. Test objective</b>	<b>2.2. Mounting techniques</b>
The purpose of the tests was to demonstrate that the unit behaves in compliance with the requirements stated in doc 1 to 10 referring to a seismic risk classified as Zone 4.	For all tests the unit was mounted in its intended operating configuration.  The unit was fixed to the shaking table with 8.8 M14 screws with a tightening torque of 80 Nm.
<b>1.6. Tests overall results</b>	<b>2.3. Control and measuring positions</b>
At the end of the tests, at a visual inspection, no damages on the unit were detected.	During the tests, for the motion control the signal of a measured acceleration in the excitation direction and the signals of the two accelerometers (MP1 and MP2) were placed on the unit for the vibration measurement (see photos). In the table reported below are summarized model and serial number of the transducers mounted in the control and measuring positions during the tests.

## TEOS POWERED FRAME STRUCTURE

Turkish Patent No: TR 201009615Y

Produced with a closed rail structure, Teos enclosure rails are clamped with a special non-welded clamping system. Their resistance to both vertical and horizontal pressures is extremely high compared to open rail structures. This force enables full resistance for the movement of the installed equipments and resistance in overcurrents.

## TEOS EARTING CONTINUITY

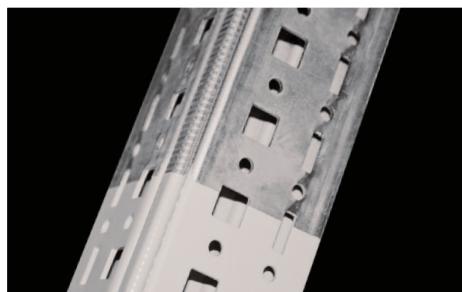

Placed on the aluminium corner combination, the earthing hooks are tightly mounted on the uncoated inner surface of the rails by means of eroding. Thereby, the earthing continuity is ensured for all rails and their parts

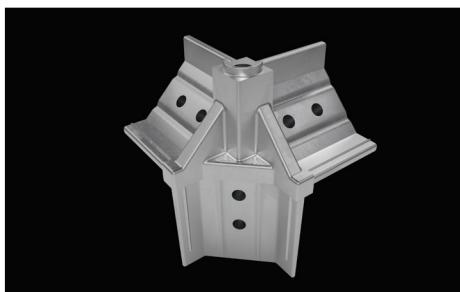

Placed on the bottom-top inner parts of the front door, the earthing screw increases conductive surface. Thereby, the front door is more efficiently grounded as the most important part to be grounded.

Applied to all other cover plates, the earthing screws allow for the complete earthing of all enclosure cover plates. Furthermore, TEOS allows for earthing all parts by use of special grounding washers.

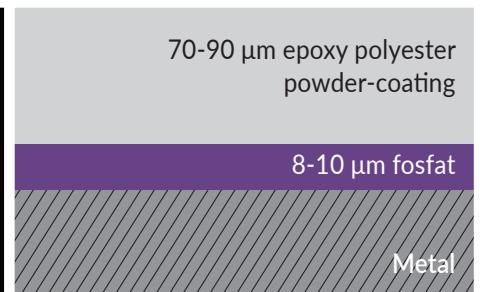

## TEOS CORROSION PROTECTION

Teos closed frame made by galvanized steel (DIN EN 10142\_00 DX51 D+Z) and coated iron-phosphated and powder coated from outside of the surface. Non-powder coated inside surface can not corrode because of the galvanized material style.

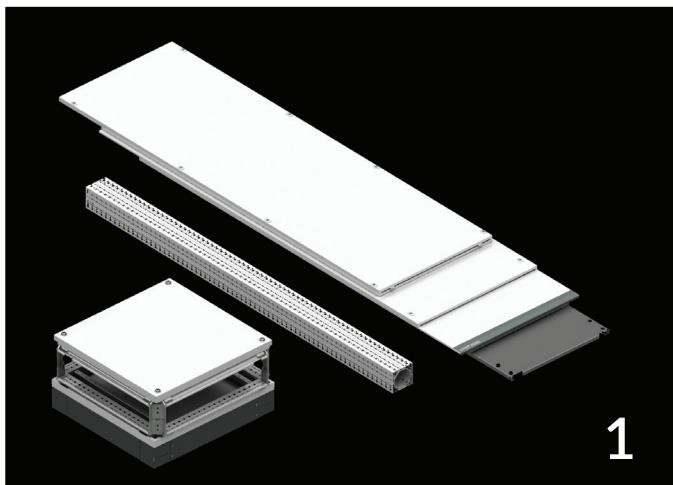

Manufactured from aluminium-cast (E-160) material, the rail connection corners do not corrode thanks to their aluminium structure.

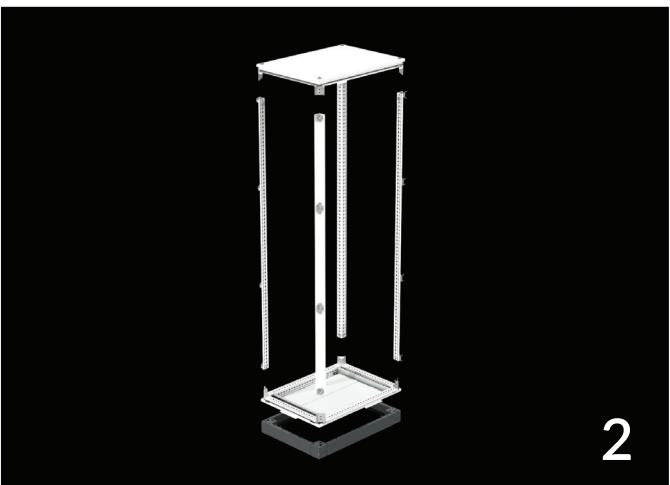

All coated parts respectively undergo the automatic processes of washing, phosphating, deionized passivation- drying- coating- firing and are treated with active coating. 500 hour salt test resistance is acquired according to the test results of this process

## TEOS EASY ASSEMBLING AND LOGISTICAL ADVANTAGES

1

2

3

4

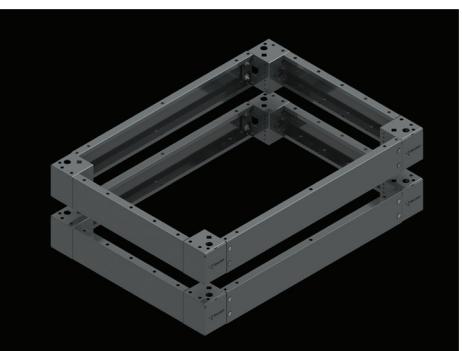

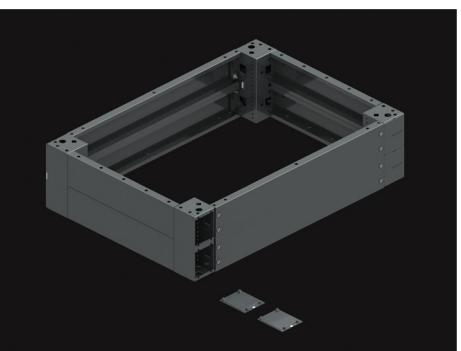

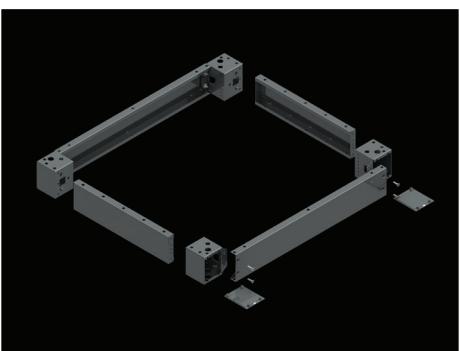

Offered as flat package, the TEOS series is designed for an easy mounting in a minimal amount of time. It does not require angulation for the body and can be mounted between 15-20 minutes by two people.

Offered as flat package, TEOS series save space during transportation and storage. However, since packages can be replaced with each other, they provide more solutions with less inventory.

You can access the Teos assembly video by scanning the QR code.

### TEOS PLINTH SYSTEM

Front surfaces of the corner parts are open in the plinth system which is designed with a height of 100 mm and 200 mm. This enables not only an easy mounting on the enclosure but also an easy ground fixing. Upon the completion of this process, the plastic panel closes without use of screws.

Plinth front panels are mounted with screws while the side panels are screwed from the inside.

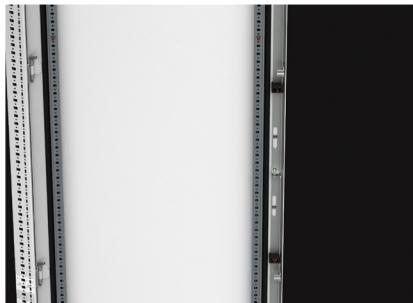

A separate corner can be used for plinth applications with a height of 200 mm as well as plinths with a height of 100 mm can be superimposed to reach the 200 mm height.

# TEOS FRONT DOOR

**Lock and hinge placed in four points**

**Wide Space and Strong Door Rail**

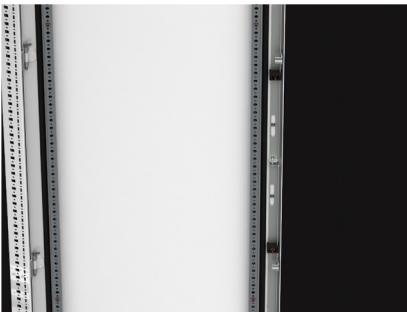

Since locking is performed on the rails, inner space of the cover plates allows for a maximum efficiency.

As the closed support rails are manufactured as a completely closed box, they are more resistant to bending. This ensures a stronger cover plate

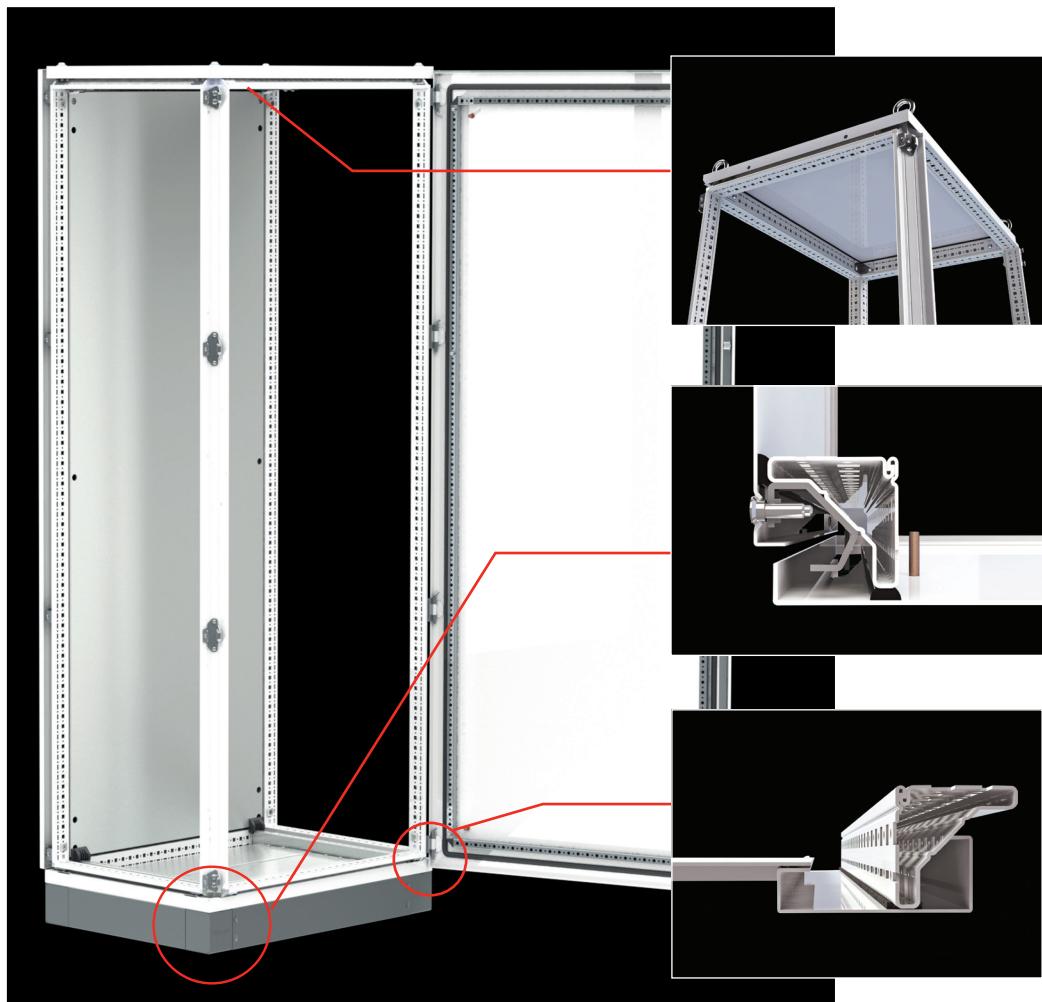

**Comfort Handle Lock with Insert Protection**

**Rigid and Durable Lock Structure**

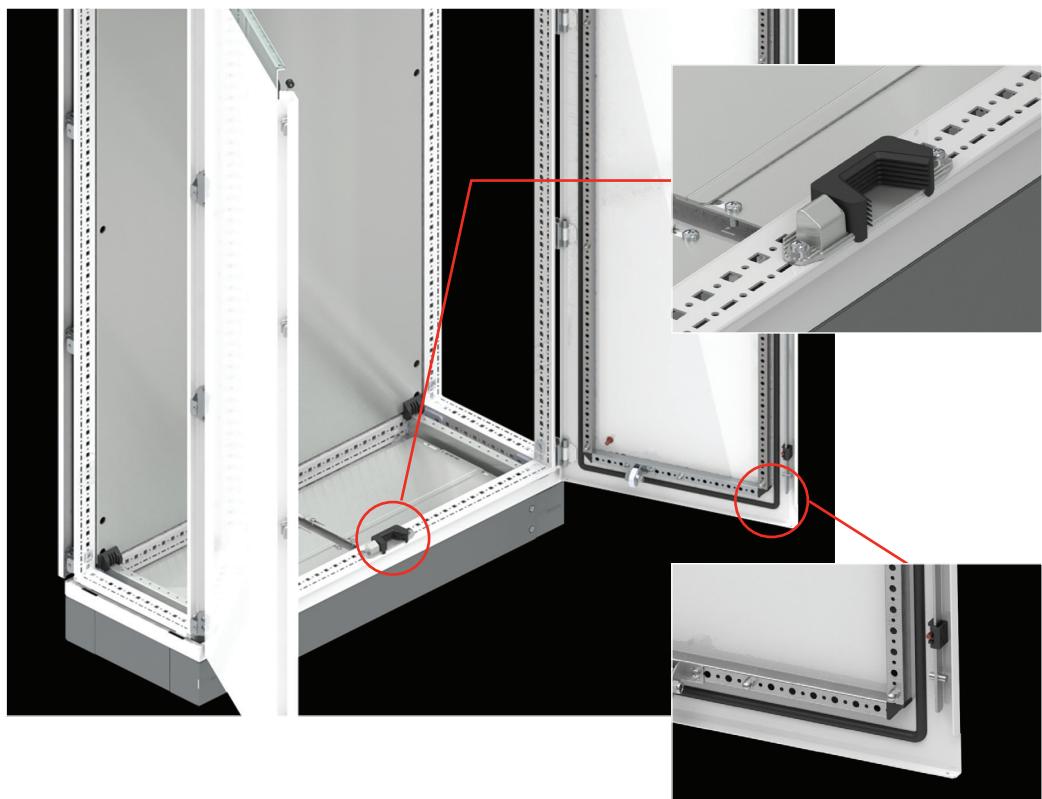

Lock failures experienced in most enclosures are prevented in TEOS. Thanks to their corrugated and long-lasting structure, the locking plates do not bend and corrode.

Sealing foam gaskets are used on the body door, back door, side panels and top panels of the enclosure. This gasket enables complete isolation between -40 and +100 C

All gaskets apply pressure on the convex frame curves. Dust and water particles are left in the space between the convex curves, and thus pressure on the gasket is prevented.

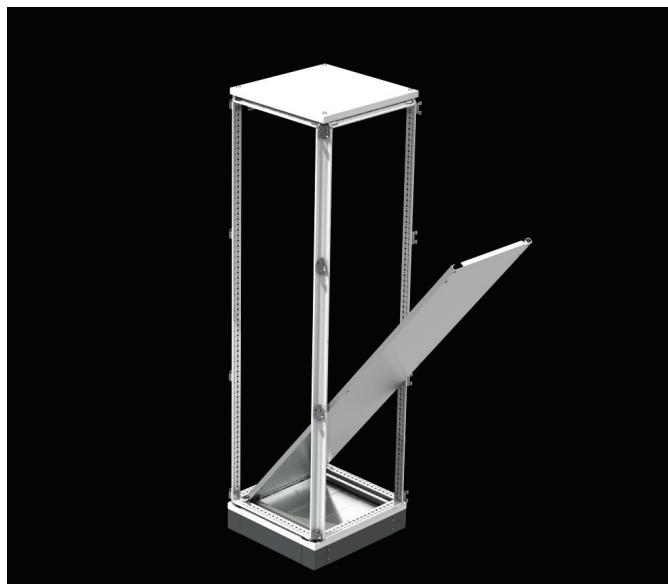

All seal applications on the covers press on the convex curves in the carcasses. Dust and water droplets are left in the area between these convex curves and the pressure on the seal is prevented.

Applied to double-door enclosures, the insulating gasket assumes a full protective role between two panels and the frame when both doors close over the gasket.

Applied to all front doors and panels, the liquid seal is used in all double-door enclosures and acts as an insulator between two doors. Locking system of both doors work separately and this enables a full gasket pressing

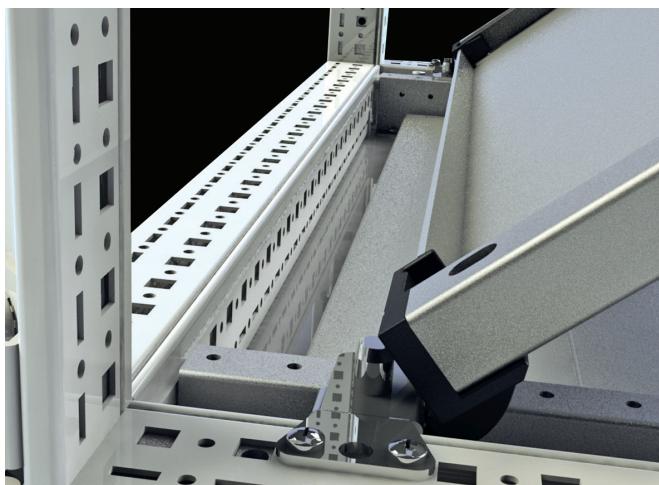

## MOUNTING PLATE SYSTEM

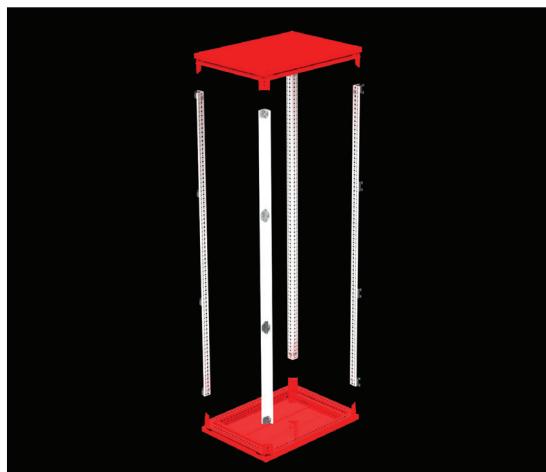

Manufactured from a 3,00 mm galvanized steel, TEOS mounting plates are railed and easily mounted. With its thick steel sheet structure, the mounting plate can carry heavy equipment with its rigid structure and does not need additional side support parts. In this way, bayed enclosure space is increased in combined enclosures.

Connected to the mounting plates, the intermediate mounting plate increases space and can move back and front together with the mounting plates.

## TOP/BOTTOM GROUP

**Relevant Size** : ENCLOSURE WIDTH x DEPTH  
**Material** :  
 Body : 1,50 mm galvanized steel+RAL7035 powder-coating  
 Top Cover : 1,50 mm mild steel +RAL7035 powder-coating  
 Bottom : 1,50 mm mild steel + RAL7035 powder-coating  
 Gland Plate : 1,50 mm galvanized steel

**Supply Includes** : 1 set of upper body, 1 set of lower body, 1 pcs gland plate, 1 pcs top cover and body mounting parts.

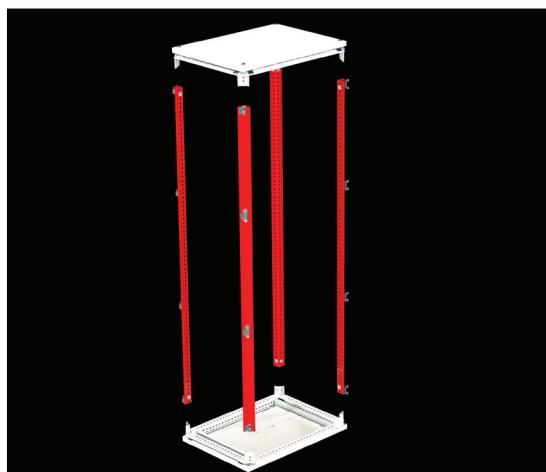

**NOTE** : 4 pcs eyebolts is added upon your request.
